

As a group, we would say that this is our best sprint in terms of completion percentage. Our tickets were mainly divided into non-A2 related tickets and A2 related tickets. We were able to complete all non-CI/CD related tickets prior to our TA demo and we were able to finish all A2 tickets prior to the deadline of A2 (which is past the due date of our sprint). As you can see, the final value of the burndown chart is 0, indicating that we were able to complete all tickets for this sprint. We felt that taking on heavier workloads in previous sprints helped with this sprint as even though we needed to carry over tickets in succeeding sprints, we ultimately ended up with an empty backlog at the end of this project.
